EDUCATION

College of Engineering Thalassery Master of Computer Applications	Thalassery, Kannur Pursing
SNG College of Advanced studies Bachelor of Computer Applications	Thottada, Kannur 2021-2024
Rajeev Gandhi Memorial Higher Secondary School Computer Science	Mokeri, Kannur 2019-2021

PROFESSIONAL SUMMARY

I am an MCA final-year student with a strong foundation in programming and web development. I have hands-on experience with React.js, Node.js, Express.js, and modern databases, and I enjoy building practical software projects. I am continuously improving my technical skills through coursework and online learning, and I'm eager to contribute to a dynamic development or IT team.

TECHNICAL SKILLS

Front-End: HTML5, CSS3, JavaScript, EJS, React.js, TypeScript
Back-End: Node.js, Express.js, Django, Flask
Database: PostgreSQL, MongoDB, MySQL, Supabase
Version Control: Git, GitHub
Programming: Python, C, C++, Java
Other: API Integration, Authentication, AI-Based Features, PRISMA ORM

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern | Inker Robotics

- Worked on a SaaS-based application, independently designing and developing the full system using React (TypeScript), Node.js, PRISMA ORM and Supabase, handling both frontend and backend development.
- Built and integrated core features including real-time data handling, API development, and database management, ensuring smooth communication between the client and server.
- Integrated WhatsApp Cloud API for automated messaging and user interaction, improving system functionality and enabling seamless communication workflows.

CERTIFICATIONS & COURSES

- The Complete Full-Stack Web Development Bootcamp — Udemy (2025)
- Introduction to Internet of Things — NPTEL (Elite Certificate, 2025)
- JavaScript Algorithms and Data Structures Masterclass — Udemy (2026)

TECHNICAL PROJECTS

Style Sync – AI Custom Dress Design & Tailoring Platform

- Implemented using Node.js, Express.js, PostgreSQL, EJS, and Multer, along with AI image generation for realistic dress previews.
- Developed a full-stack platform where users can design custom dresses and view AI-generated previews before placing orders, improving user confidence.
- Built a complete workflow system with User, Tailor, Measurement Agent, Delivery, and Admin modules, handling everything from design to delivery.

Invoice–PO Comparison Automation System

- Built with Node.js, Express, React (Vite), and Multer, with features like file upload, result table, and CSV download.
- Created a system to compare invoice and purchase order (PO) files and check if details like vendor, total, and items match correctly.
- Used Gemini API (or OCR fallback) to extract data from documents and calculate a match score for validation.

Syllabus Smart Search (AI-based Academic Semantic Search)

- Developed the system using Django, SQLite, HTML, CSS, and JavaScript, with features like user login, PDF upload, and per-user document management.
- Built an AI-based web app that helps students find exact textbook definitions and diagrams for syllabus topics using semantic search, improving accuracy and avoiding wrong AI-generated answers.
- Used SentenceTransformers and Gemini API to understand topic meaning and match it with the most relevant textbook content, along with a confidence score.
